

(Per Diem) MRI Technologist

Job description

Job Overview

We are a busy MRI department where we perform variety of general MRI's. We are looking for a candidate who will ensure patient safety, comfort and proper positioning during procedures, while adhering to established protocols and safety standards. The MRI Technologist will be responsible for maintaining equipment, ensuring compliance with regulatory standards and collaborating with physicians and other healthcare professionals to deliver accurate diagnostic information.

Duties

- The MRI Technologist must demonstrate professional radiological imaging skills to assure quality management of all aged patients (adolescent through geriatric).
- The responsibilities include, but are not limited to, MRI safety, quality control, patient satisfaction, efficiency and the adherence to all American College of Radiology guidelines.
- Responsible for producing quality MRI imaging, obtaining medical history, following pre-set protocols, while maintaining highest quality of patient care and safety.
- She/he must be able to communicate to patients the nature of the exam and relieve their anxiety.
- Must demonstrate excellent positioning; imaging technique, imaging equipment knowledge, quality control and infection control.

Requirements

- Knowledge and understanding of general anatomy, physiology and medical terminology.
- High level of cross-sectional anatomy, preferred.
- Knowledge and understanding of MRI technology.
- Strong and Interactive communication skills.
- Ability to demonstrate initiative, problem solving and the ability to make sound decisions.
- Strong Organizational skills, ability to work independently with exceptional attention to detail.

Education

- Graduate of school of Radiologic Technology.
- Current radiography license in State of Delaware
- ARRT registered: board certification in MRI
- Current BLS Certification, Required

Experience

- Previous MR experience highly preferred
